What is medallion architecture?

- a way to organize data in data lakehouse

- when data are continuously refined throughout a data pipeline, data with improving quality are stored in different data layers
    - bronze
    - silver
    - gold

Benefits of medallion architecture

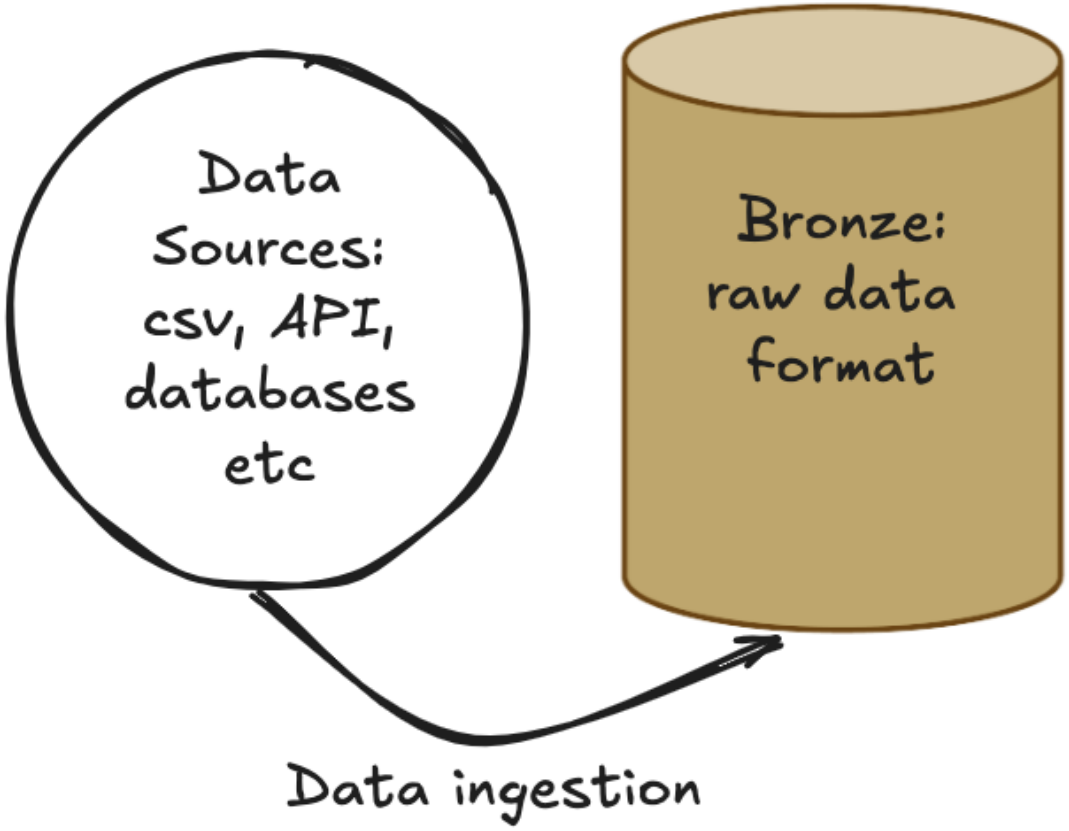
- preserve historical archive of source data and make reprocessing easy

- enable step-by-step transformation

- data lineage for debugging

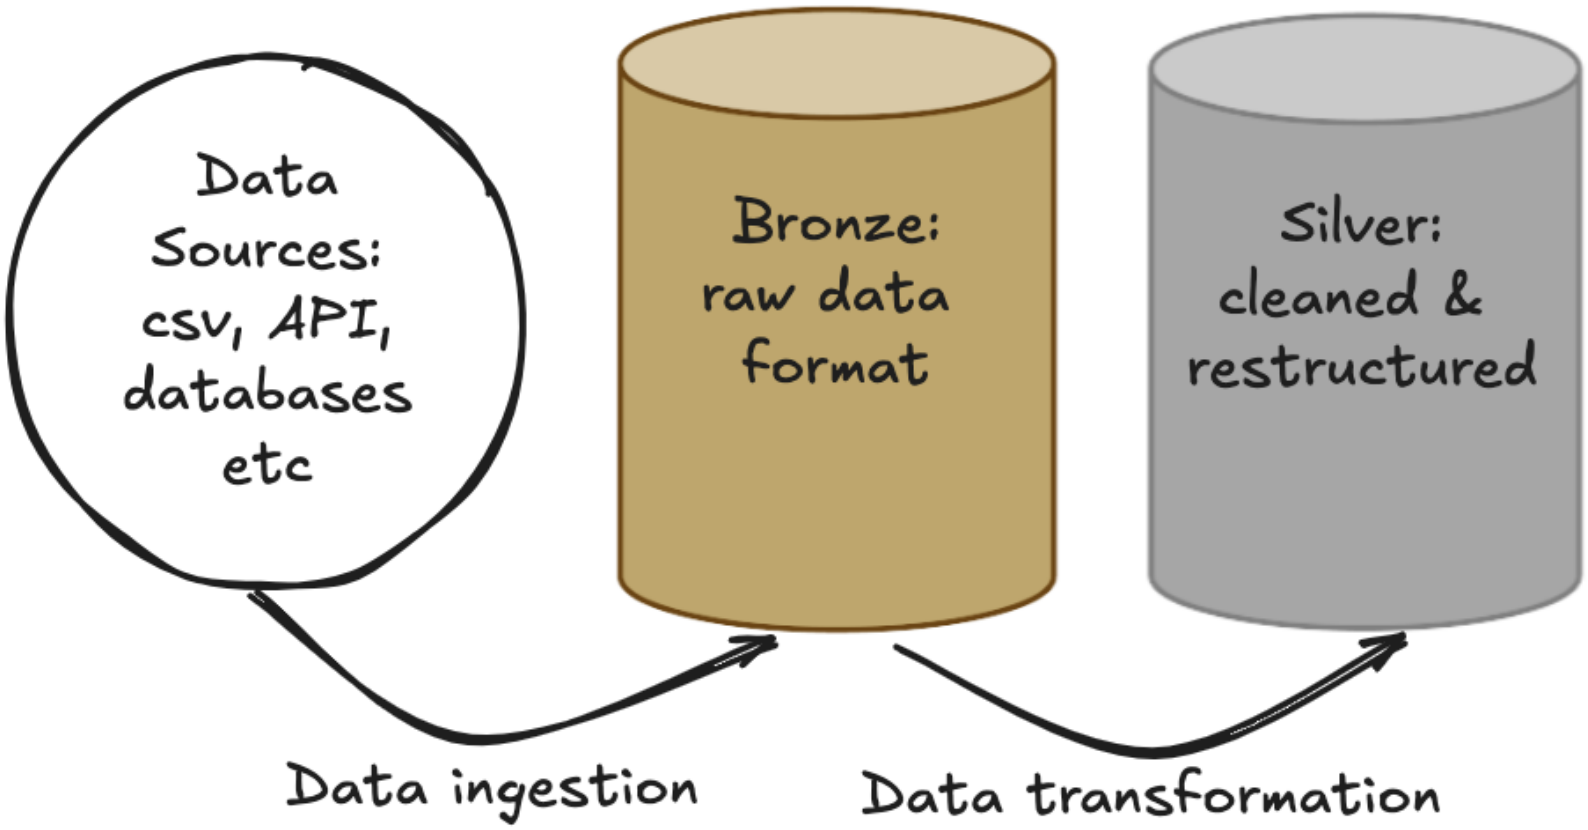
- enhance performance by scaling layers separately

Data layers



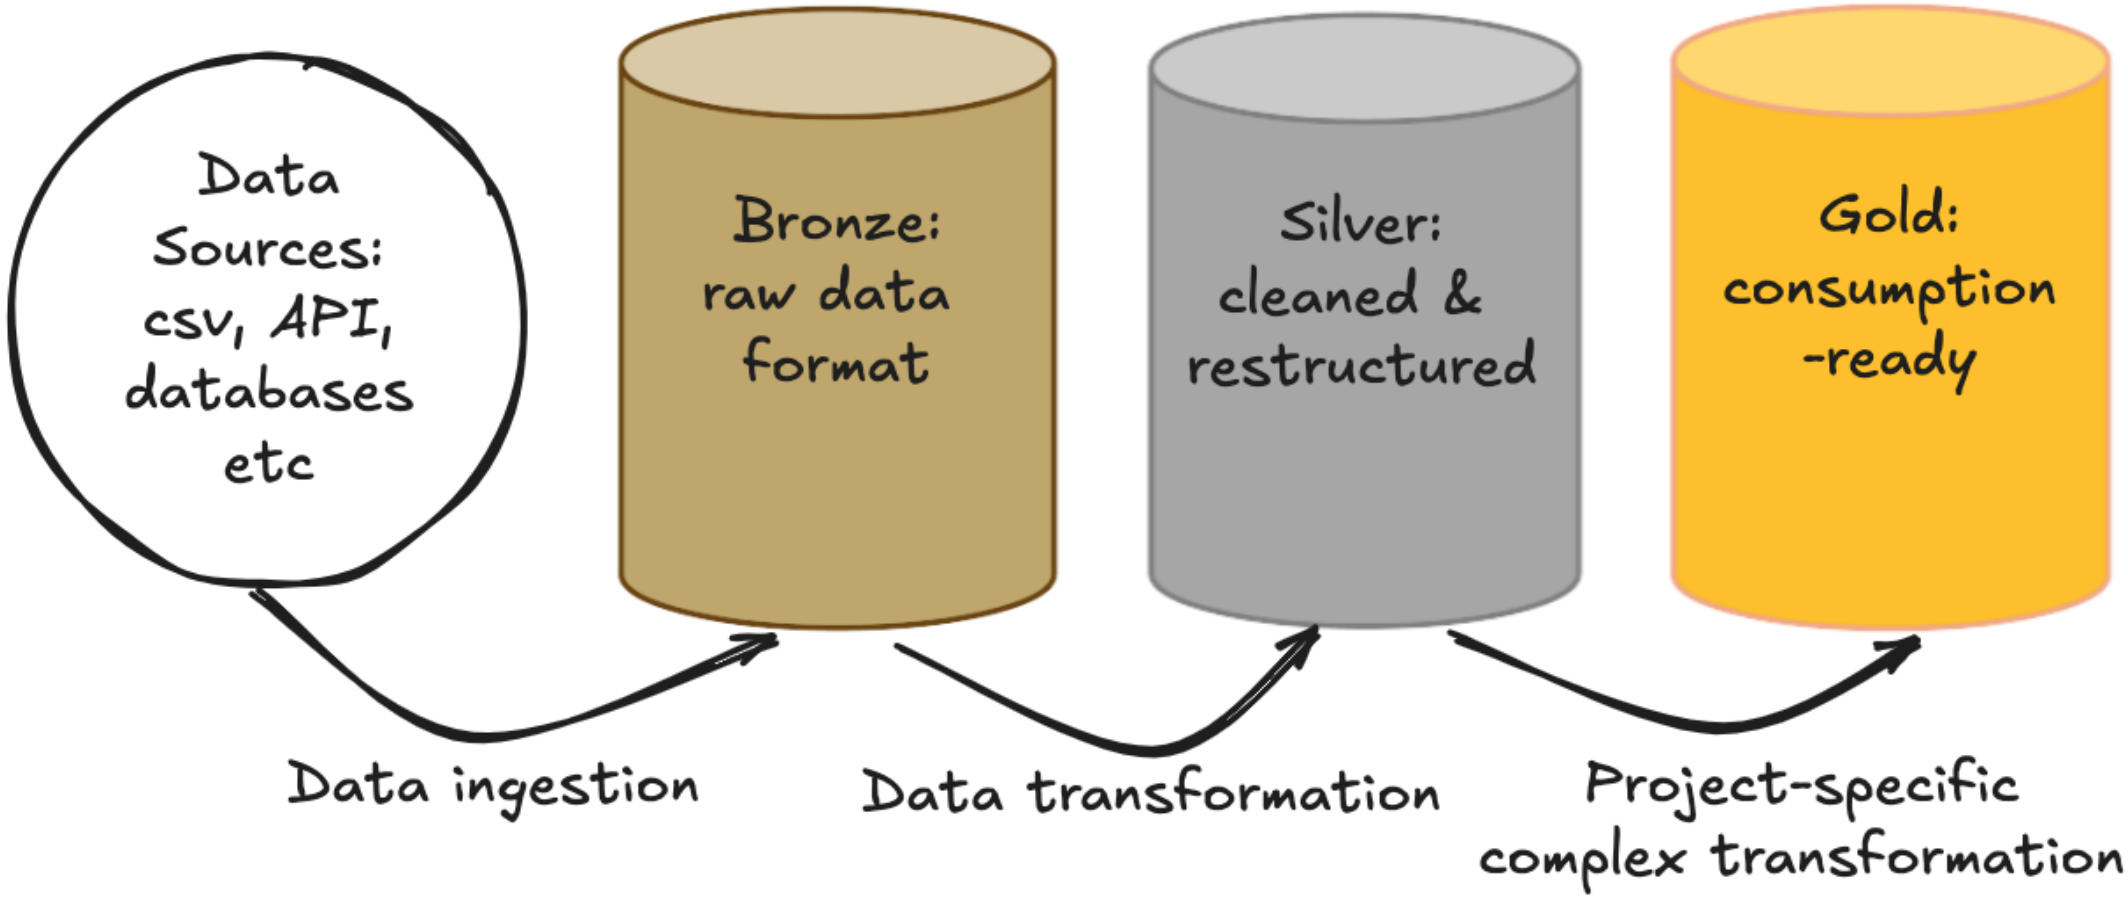
Data Sources: csv, API, databases etc
Bronze: raw data format
Data ingestion

Data layers



Data Sources: csv, API, databases etc
Bronze: raw data format
Silver: cleaned & restructured
Data ingestion
Data transformation

Data layers



Data Sources: csv, API, databases etc
Bronze: raw data format
Silver: cleaned & restructured
Gold: consumption -ready
Data ingestion
Data transformation
Project-specific complex transformation
